DETAILED ACTION

1. Claims 1-30 are presented for examination.
2. The examiner requests, in response to this Office action, any reference(s) known to qualify as prior art under 35 U.S.C. sections 102 or 103 with respect to the instant claims. That is, any prior art (including any products for sale) similar to the instant claimed invention that could reasonably be used in a 102/103 rejection. This request does not require applicant to perform a search. This request is not intended to interfere with or go beyond that required under 37 C.F.R. 1.56 or 1.105. This request may be fulfilled by asking the attorney(s) of record handling prosecution and the inventor(s)/assignee for references qualifying as prior art. A simple statement that the query has been made and no prior art found is sufficient to fulfill the request. Otherwise, the fee and certification requirements of 37 CFR section 1.97 are waived for those documents submitted in reply to this request. This waiver extends only to those documents within the scope of this request under 37 CFR, section 1.105 that are included in the application's first complete communication responding to this requirement. Any supplemental replies subsequent to the first communication responding to this request and any information disclosures beyond the scope of this request under 37 CFR section 1.105 are subject to the fee and certification requirements of 37 CFR section 1.97.

In the event prior art documentation is submitted a discussion of relevant passages, figs. etc. is requested. **A response to this inquiry is greatly appreciated.**

The examiner also requests, in response to this Office action, support be shown for language added to the claims on amendment. That is, indicate support for newly added claim language by specifically pointing to page(s) and line no(s) in the specification and/or drawing figure(s). This will assist the examiner in prosecuting the application.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1-30 are rejected under 35 U.S.C. § 102(e) as being anticipated by Mackenthun et al. (Pat. No. 6,374,332).

Mackenthun teaches the claimed "input-output interface" as circuitry including interface 370 shown in figure 4. The claimed "first address" corresponds to a read request on line 410. The claimed "address queue" corresponds to circuitry including write buffer logic 434, write request 2 logic 438

Art Unit: 2188

and write request 1 logic 454 for storing all pending write addresses. The claimed “second address of a pending transaction” corresponds to all pending write addresses. The claimed “address logic circuitry” corresponds to circuitry for comparing read request addresses to pending write addresses as discussed at col. 15, lines 10-15. The claimed “ownership pre-fetch circuitry” corresponds to circuitry including snoop logic circuitry 432. The claimed “transaction queue” corresponds to circuitry including read request register 412, write request buffer logic 434, write request 2 logic 438 and write request 1 logic 454. The claimed “memory device coupled with said transaction queue” corresponds to circuitry including storage device 1, storage device 2, tag ram 414 and/or data storage devices 419. The claimed “cache” corresponds to first level cache (FLC) 404 and/or second level cache (SLC) 360. The claimed “transaction bypass circuitry” could correspond to circuitry for accessing the third level cache (TLC) 310 and/or crossbar module (TCM) 220 for accessing main storage 110.

The examiner believes all of the dependent claim features are taught by Mackenthun. That is, the more well known claim features commonly found in the dependent claims are explicitly or inherently found in Mackenthun. For example, claim 4 discusses invalidation. Invalidating data is discussed throughout Mackenthun (see the background of the invention and detailed description) and is generally a well known feature of cache coherency. Many of the claim features, while part of the invention, appear to be well known and their relevance not

essential to the main invention found in the independent claim(s). Thus, a detailed discussion of the well known claim feature(s) is not warranted at this time.
